ICAC Price Projections

Season-average Cotlook A Index (U.S. cents per pound).

	Projection	Change/Month
2009/10	70*	+1

* The price projection for 2009/10 is based on the ending stocks/consumption ratio in the world-less-China in 2007/08 (estimate), in 2008/09 (estimate) and in 2009/10 (projection), on the ratio of Chinese net imports to world imports in 2008/09 (estimate) and 2009/10 (projection), and on the average price for the first five months of 2009/10. 95% confidence interval: 64 to 77 cents per pound.

COTTON THIS MONTH

From the Secretariat of the ICAC
January 4, 2010

Production and Consumption Rising in 2010/11

World cotton production and consumption are forecast to rise in 2010/11 in response to higher prices for cotton and rising incomes. The Cotlook A Index stood near 80 cents per pound at the end of December 2009, compared with less than 60 cents one year earlier. The latest projections from the IMF indicate that the world economy is headed toward positive growth in 2010, an improvement over conditions in 2009.

2010/11 world cotton production is forecast at 24.2 million tons up nearly 10%. 2010/11 production in China is forecast at 7.7 million tons, one million tons higher than in the current season. Most of the gain is expected to come from increased area in response to higher domestic prices. 2010/11 Production in India is estimated little changed from 2009/10 as most of the gain in yields tied to improved technology has already been achieved. U.S. production is expected to climb by one-tenth to reach three million tons, primarily because of increased cotton area. Production in Pakistan, Brazil and Uzbekistan, collectively, is estimated at 4.6 million tons in 2010/11. The three countries are accounting for 4.3 million tons of production in 2009/10.

Forecasts by the IMF, UNCTAD, the U.S. Federal Reserve and OECD all indicate that the recovery in world GDP growth during 2010 and 2011 will be gradual. Accordingly, since income growth is an important explanatory variable in models of fiber use, projections of world fiber use at the consumer level for 2010 and 2011 indicate only modest growth. A comparison with the pattern of recovery following the world recession in 1973 supports a forecast of gradual recovery in fiber consumption at the end use level (COTTON: Review of the World Situation, November-December 2009, ICAC). Therefore, cotton mill use is forecast at 24.4 million tons in 2010/11, an increase equivalent to the long run average of 2%. With the rise in cotton prices during 2009, cotton is less competitive with polyester than previously, and a full recovery in world mill use to the record of more than 26 million tons may take several years.

World trade is forecast at 6.9 million tons in 2010/11, essentially unchanged from the level expected in 2009/10. The ratio of world trade in cotton to world mill use ranged between 0.28 and 0.38 since 1990/91. The ratio of imports to mill use is currently less than 0.30, and imports are expected to remain low relative to mill use during 2010/11 unless import policies by the Government of China change substantially.

Based on the expected change in the ratio of ending stocks to use outside China and the average Cotlook A Index to date, the 2009/10 Cotlook A Index is estimated at 70 cents per pound. The 95% confidence level extends from 64 cents to 77 cents.

A COMPREHENSIVE BOOK **COTTON FACTS**

The cotton market is one of the most exciting and diverse commodity industries in the world, providing employment to hundreds of millions of farmers and processors and serving as an engine of economic growth in both developed and developing countries across six continents. Cotton is simultaneously an agricultural product and industrial raw material, affecting the lives of almost every person in the world every day.

COTTON FACTS is a unique publication in the cotton world, bringing together under one cover a broad spectrum of basic knowledge about all aspects of cotton production, consumption and trade. The publication is based on more than 40 years of combined experience in cotton research and marketing by the authors and also incorporates the work of many cotton researchers from around the world.

COTTON FACTS is a comprehensive book (158 pages) including fundamental, common and specific facts about cotton. The book covers all aspects of production, agronomy, breeding, biotechnology, plant protection, fiber quality, ginning, textiles, pricing and marketing of cotton. No other publication has such a broad range of cotton information.

COTTON FACTS is a useful educational tool as well as a reference for producers, traders and others with an interest in cotton matters.
